In the Claims:

Please cancel claims 1-13, without prejudice.

Please add the following newly-presented claims:

- B2*
- ~~14.~~ A flat panel liquid-crystal display, such as for a laptop computer, the flat panel liquid-crystal display comprising one of: a twisted nematic display, a supertwisted nematic display, an active matrix liquid-crystal display, a thin film transistor display, and a plasma addressed liquid-crystal display, said flat panel liquid-crystal display comprising:
- backlight apparatus;
 - a first linear polarizer adjacent said backlight apparatus;
 - a first positive uniaxial retardation film adjacent said first linear polarizer;
 - a first negative retardation film adjacent said first positive uniaxial retardation film;
 - a first orientation film adjacent said first negative retardation film;
 - a liquid-crystal layer adjacent said first orientation film;
 - a second orientation film adjacent said liquid-crystal layer;
 - a second negative retardation film adjacent said second orientation film;
 - a second positive uniaxial retardation film adjacent said

second negative retardation film;

a second linear polarizer adjacent said second positive
uniaxial retardation film;

a first glass substrate being disposed between said first
orientation film and said first negative retardation film;

a second glass substrate being disposed between said second
orientation film and said second negative retardation film;

a first electrode being disposed between said first glass
substrate and said first orientation film; and

a second electrode being disposed between said second glass
substrate and said second orientation film;

said first and said second glass substrates comprising:

an alkali-free aluminoborosilicate glass;

said glass having a coefficient of thermal expansion
 $\alpha_{20/300}$ of between $2.8 \times 10^{-6}/K$ and $3.8 \times 10^{-6}/K$;

said glass having the composition (in % by weight,
based on oxide):

SiO ₂	> 58 - 64.5
B ₂ O ₃	> 6 - 10.5
Al ₂ O ₃	20.5 - 24
MgO	0 - < 3
CaO	2.5 - < 8
SrO	0.1 - 3.5

BaO > 5 - 7.5
with SrO + BaO ≤ 8.6
with MgO + CaO + SrO + BaO 8 - 18
ZnO 0 - < 2;

said glass being configured to be resistant to thermal shock;

said glass being configured to having a high transparency over a broad spectral range in the visible and ultra violet ranges; and

said glass being configured to be free of bubbles, knots, inclusions, streaks, and surface undulations.--

--15. The flat panel liquid-crystal display according to claim 14, wherein:

said glass comprises at least one of (a.), (b.), (c.), (d.), (e.), (f.), and (g.), where (a.), (b.), (c.), (d.), (e.), (f.), and (g.) are:

(a.) more than 8% by weight of B_2O_3 ;

(b.) one of: at least 18% by weight of Al_2O_3 , more than 18% by weight of Al_2O_3 , at least 20.5% by weight of Al_2O_3 , and at least 21.5% by weight of Al_2O_3 ;

(c.) at least 0.1% by weight of ZnO;

(d.) additionally (in % by weight):
